

Identifying a Jack Style

1) Is it a jack that **raises and lowers** the **roof**, or to **load & unload the camper** on/off of the truck? If it raises & lowers the roof, you have either "Roof Lift Jacks" or an "Actuator" jack.

2 How do you operate the jack?

With a hand-held remote control, a pump-handle, or a crank-handle?

If you use a **crank handle**, is your jack mounted on the camper corner or underneath the camper?

If the jack is mounted on the camper corner, you have either a Four-Corner Mechanical jack or a Convertible Style jack.

The Convertible jack has **set screws** under the crank head for easy **upgrade** to electric jack. This jack requires the Upgrade Kit.

The Four-Corner Mechanical jack is welded onto the jack leg and would require the Conversion Kit to **convert** to electric jacks.

If the jack is mounted underneath the camper, is there **tripod base** on it?

If there is, does the tripod base also have a chain around it? If there is a chain, you have the Heavy Duty 2000# tripod jacks.

If there is no chain, you have the Standard 1000# tripod jacks.

If you use a pump-handle to operate the jack, you have Hydraulic jacks.

If you use a **hand-held remote control**, you have either Electric jacks, or Convertible Style jack with a Powerhead on it.

To determine which one you have, is there a blue Rieco-Titan label on the jack outer tube near the top of the jack that reads "**2000#**", underneath the powerhead?

If there is, you have a Convertible Style jack.

If there isn't, you have an Electric jack.

(The label on the powerhead reads "2500#" and the powerhead is what you notice most. The 2500# powerhead is used on both Electric jacks and Convertible Jacks that have been converted from "mechanical" to "electric".)

Another factor to determine between Electric and Convertible is the footplate. Are your **Footplates welded** (Convertible), or is the footplate **attached with a bolt** underneath (Electric)?

If you have Four-Corner Mechanical Jacks or Convertible jacks, there are separate, specific conversion or upgrade kits for each.

*Here is the Kit for the **Convertible Jack upgrade kit in black** if you have Convertible Jacks.*
